Reliability, Repeatability and 3 Button Operation

PRO-MIC PRO-FILER

The PRO-FILER is a hand held temporary storage device for roll profiles measured with a PRO-MIC. The PRO-FILER accepts entry (through its alphanumeric keypad) of a variety of descriptive information about your profiles including roll number, diameter, mate number, grinder and mill.

The PRO-FILER:

Will store up to thirty five 50" (890mm) long roll profiles optionally including PRO-MIC Temperature data.

Allows roll ticket annotation including: roll number, grinder operator, roll diameter, etc.

Is 9v battery operated; may be hand-held or snaps into optional bracket on PRO-MIC.

Allows operator to review data without printing.

Will drive printer directly through interface or data may be sent to PRO-MIC Visual Quantum Software.

Plots identifying data along with the profile.

Provides automatic Time and Date annotation.

Stores data until erased - even when unit is off.

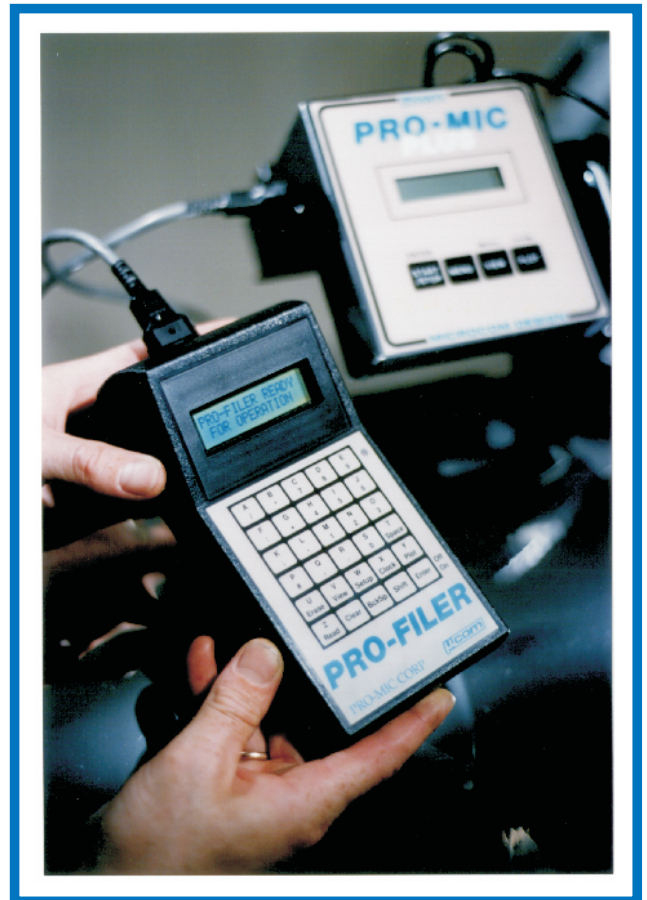

Allows each record to be selectively erased/edited or all records may be erased.

Plugs into standard connector on PRO-MIC.

Stores data for dumping to a Personal Computer.

Supports Roll Model Shape Analysis.

Hot Start Red-button for starting PRO-MIC electronics included.
